T3 Partners

Tiger Team is pleased to partner with Protexx Incorporated. Protexx provides the base security platform for our EncrypTrac and SecureTrac products. Protexx's cutting edge technology allows Tiger Team to provide the assurance of secure transmissions even over the public Internet.

T3 Auditrac

Transmission Indemnifying Program

- Your corporate information systems and transmission facilities have been designed, documented, scrutinized, modified, implemented and tested. Your systems undergo the most rigorous inspection that today's technology can provide. You are completely confident in your ability to stave off any attempt to violate your information.

Where do you go from here?

- From a technology perspective, your company has provided itself every available protection and service for information and transmissions. But, in today's litigious society even more protection is required.

How can T3 help?

AUDITRAC

AUDITRAC

“Next Generation” Best Practice which:

Protects against Fiduciary Loss due to Civil Litigation, “Client Specified” Statutory Fines and legal costs

Applications:

HIPAA:

Transmission of Protected health information (PHI) over the Internet or Wireless Networks.

Service Providers:

Indemnification for Messaging Platforms and Carriers

Commercial:

Indemnification protection for both parties in e-transactions, regardless of type, i.e. Business to Business or Business to consumer.

AUDITRAC

Who can use Auditrac?

- Carrier's in both Traditional & Wireless Networks
 - Financial Services Providers
 - Health Services & Providers
 - Telecommunications and E-commerce processing
 - Consulting and Outsourcing Companies.

What is AUDITRAC?

- Auditrac adds best practices where your technology stops.
- Auditrac protects you financially from loss of your sensitive data getting into the wrong hands.
- Protects you monetarily, up to a fixed amount and is unique in its method.
- The Auditrac process is the next addition to best practices providing protection for transmissions that are considered sensitive.
- With the Internet becoming more utilized, T-3 can give you indemnification from any information that is routed incorrectly and used against you. Governments have placed priority on information exchange privacy and we have the solution.
- Why do this? Because we offer the only verifiable way that you can be protected from potentially huge losses occurring from sensitive data getting into the wrong hands.

AUDITRAC SOFTWARE FUNCTIONALITY

The following slide shows the functional outline of the program & product. This software is available with or without the Indemnification or the EncryptTrac modules.

This enabling functionality leads to other possible applications, or services that would be of interest to your organization and your clients.

AUDITRAC SOFTWARE FUNCTIONALITY

- Scans messages/transmissions based on protocol
- Any standard protocol can be built into Auditrac
- Intercepts messages based upon protocol selected
- Copies the message
- Tags the message
- Encrypts the message
- Can Indemnify the message within Contractually Defined parameters
- Stores the message based upon defined parameters
- Retrieves the message based upon defined parameters

EncryptTrac*

EncryptTrac is a new vehicle for securing transactions throughout your enterprise or through the World Wide Web.

EncryptTrac can ensure the safety of Outbound Data Transmissions against Hackers, and can be teamed with Auditrac.

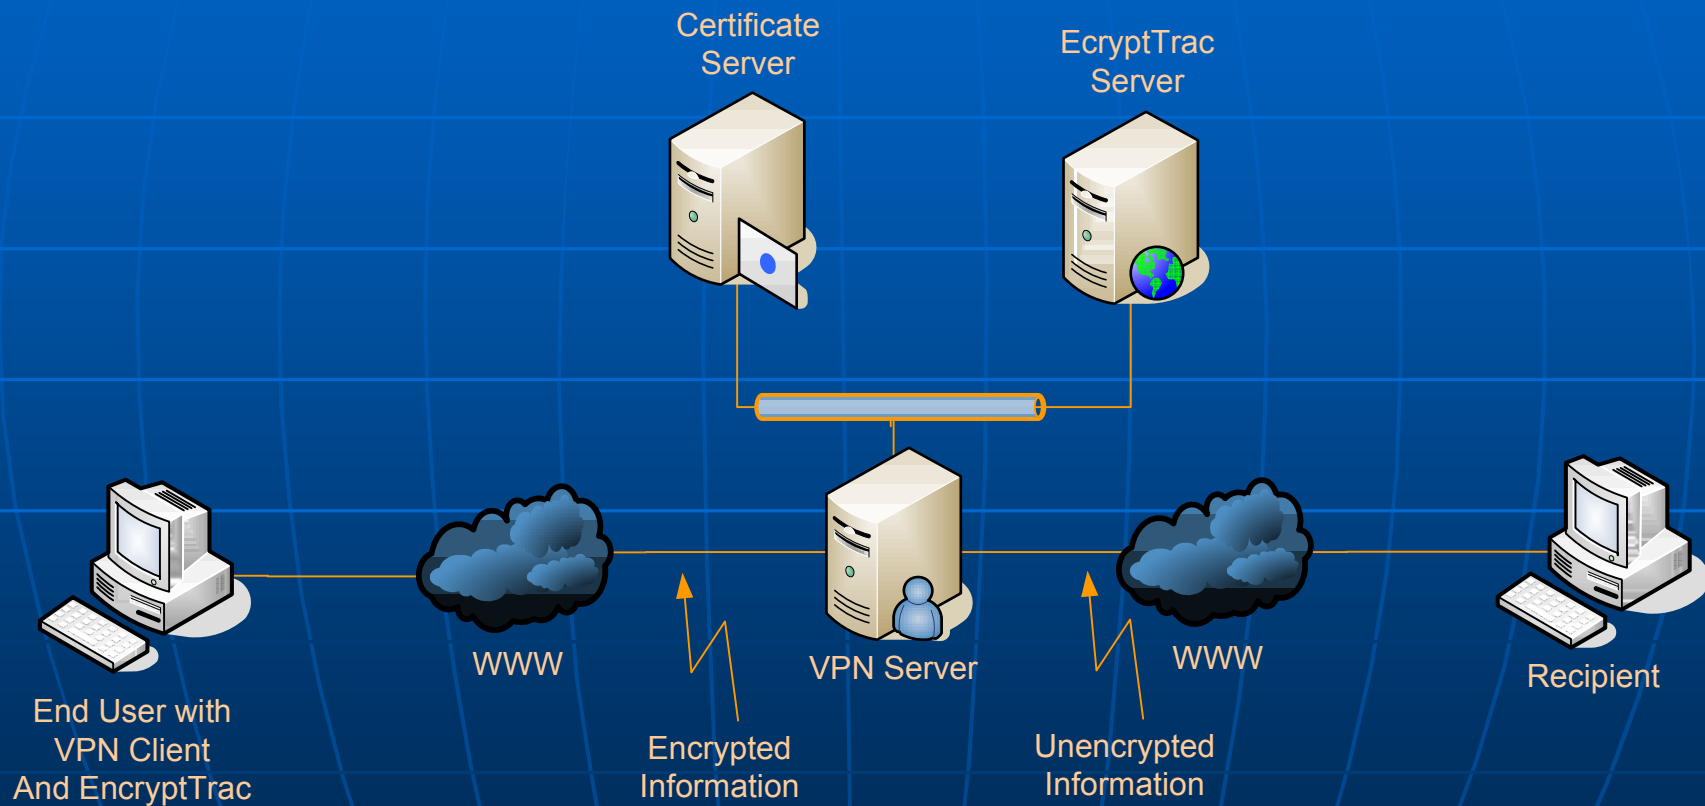

Auditrac indemnification program for the ultimate in protection

- Minimal User Participation
- Single use to Continuous usage
- Customized VPN connection with 256K encryption using an internal tunnel 2048bit encryption key**
- Client Premise or ASP (web service) installation

** EncryptTrac is subject to the current export laws of the United States of America

*Portions of the EncryptTrac technology are provided by PROTEXX, Inc., Secure VPN Certificate services & Encryption algorithms provided by and developed by PROTEXX, Inc.

EncryptTrac*

*VPN Connectivity & Encryption Technology provided by Protexx, Inc.

Frequently Asked Questions:

We self-insure, what benefit is derived from Auditrac?

What IRR do the investments that your self-insurance pool provides? Auditrac provides the capability of charging the customer for the Fiduciary Protection, while marking up the service and deriving PROFITS.

What is the cost per transaction?

Each solution is developed for each client, As Auditrac was developed originally for the HIPAA regulatory environment, we can offer coverage (per occurrence) up to \$5,000,000.00.

The Cost would vary accordingly, based upon: Risk (sensitivity of data, Infrastructure Environment, Fiduciary value) Volume of Transactions, and routing of transactions.

How does Auditrac function in the infrastructure?

T3 has both an client premise appliance installation or a ASP/"Service Provider" implementation (recommended for Fortune 100-1000 Enterprises)

Doesn't my Error & Omissions (E&O) General Business Liability Insurance cover data transmissions?

In general, E&O exempts data or electronic transmissions from coverage, unless a "multiple seven figure" blanket rider is put in place. This of course creates added cost. Not Revenue and Profits as Auditrac does.

Revenue Generating Application

E-Commerce Providers:

Goal: Illustrate commitment to finding solutions that benefit their clients.

How? By providing an indemnification protection service that can protect against loss due to Civil Litigation.

- 1. *Auditrac* is customized to create the correct solution for each provider and their application.**
- 2. Specific protection of data & coverage per defined "transaction"**
- 3. A client can select multiple options for protection at a fixed cost**
- 4. A confirmation of protection is sent to the client**
- 5. The *Auditrac* cost is passed on to the end user with a margin provided to the provider**
- 6. The provider is also protected from Civil Litigation coming from that specific transaction (up to the specified per occurrence amount).**

First To Market

T3 can provide a true Recurring Revenue Stream & Profits to the bottom line. This can also provide a vehicle into the Managed Services area, where others such as Microsoft, are intending to garner Market share and Revenue.

The Auditrac product set will place your company into the position of being a driver of "Next Generation" Best Practices for E-Commerce.
